

Scenario:

You realize that you have been slacking at your job due to your lack of sleep. You are always tired and moody as a result of this. It is causing your life to spiral downhill and you need to find a way to get your sleep schedule back on track. You find a great, new alarm clock app that seems like it would help greatly to improve your sleep.

Tasks:

1. You want to be able to wake up in time to go to work. Set your alarm clock to wake up at 6:30am.
2. Now that you can wake up on time, you want to be able to wake up to a song from your music library. Find and select the song "Wake Me Up Before You Go-Go" by Wham!
3. Now that you can wake up happily to the song of your choice, you want to figure out why you are having trouble sleeping. Find helpful articles that can help you get to sleep better and faster.

Notes:

What to change:

1. I should change the "How to get better sleep" article section because it is so similar to "Why is it so hard for me to go to sleep?"
2. I should make the buttons for changing the time of waking up to be less confusing.

What to keep the same:

1. I should keep the import feature the same so the user can wake up to their favorite songs
2. I should keep the Sleep Help feature as it helps the user gain tips on how to get a good night's sleep.
